

**STAY AHEAD,
WITH RISK
SENSING AND
HORIZON
MONITORING**

If your risk strategy is still built around static assessments and spreadsheets, you're not **managing risk** - you're documenting it.

Risk is no longer a quarterly conversation. It's evolving by the hour - through global supply chains, geopolitical shifts, customer sentiment, cyber threats, climate events, and competitor action.

By the time a traditional risk framework flags a problem, the impact is already unfolding - reputational damage, regulatory fines, operational disruption, or missed market opportunities.

To protect business value - and stay ahead of your peers - risk leaders need real-time situational awareness. You need the tools to sense disruption before it strikes, and to act faster than the risks can spread.

Proactive intelligence for a dynamic risk environment

Unify Today's Horizon Monitoring and **Risk Sensing** solutions transform the way **you manage uncertainty** - move into a world of live signals, emerging threats, and predictive foresight.

Powered by artificial intelligence, these tools give you **24/7 visibility** into both **external and internal risk vectors** - from shifting regulations and climate events to control failures and third-party vulnerabilities.

**You don't just see what happened.
You see what's coming.**

Horizon Monitoring: External Awareness That Delivers Advantage

Your risk exposure is shaped by what happens outside your business - in markets, media, legislation, and supply chains.

Unify Today's Horizon Monitoring engine scans thousands of structured and unstructured data sources across:

- Global news, trade, and media outlets
- Social media, forums, and reputational signals
- Competitor activity and strategic shifts
- Climate, natural disaster, and extreme weather feeds
- Geopolitical unrest and regional risk
- Commodity and supply chain disruptions

This enables your team to:

- Anticipate **external threats** before they impact operations
- Respond faster to **market dynamics** and industry shocks
- **Monitor risks** across all your regions, partners, and verticals
- Make **risk-aware strategic decisions** - in real time

Risk Sensing: Internal Intelligence That Protects Value

Emerging threats don't just come from the outside. Weak signals often lie hidden within your own systems, controls, and processes.

Risk Sensing by Unify Today integrates with your internal data landscape to detect:

- ⚠ Control failures and compliance breaches
- 📊 Anomalous trends in operational, audit, or incident data
- 🔄 Changes in key risk indicators (KRIs) or thresholds
- 📉 Deterioration in vendor performance or system reliability
- 🔒 Signs of data privacy, access, or cyber vulnerabilities

Using machine learning and advanced analytics, Risk Sensing identifies patterns and deviations early - **before they escalate into real-world impact.**

- Strengthen control effectiveness
- Accelerate response to risk signals
- Support Combined Assurance efforts
- Move from lagging to leading indicators

Let's give your team the power of foresight.
